

REHBER - EU38 top, knit 63% stretch (F-H IS 2)

fabric.band

This pattern is cut for a stretchy fabric: 63.0% crosswise stretch, drafted with -5.0% ease at the bust. A different stretch class needs a different cut re-draft rather than guess.

BASIS computed:stretchPct=63.0;band=stretchy;chestEasePct=-5.0

fabric.stretchTest

10 cm stretch test: mark 10 cm across the grain and pull it along a ruler. For this pattern it must reach between 15.0 cm and 17.5 cm (that is 50.0% to 75.0% stretch). Less than that and it will not go on; more and it will sag.

BASIS computed:testLenCM=10;minCM=15.0;maxCM=17.5;lowPct=50.0;highPct=75.0

sew.needle

Needle: ballpoint / stretch, 75/11 to 80/12. A sharp needle cuts the knit loops and the seam runs like a ladder.

BASIS source:unl-knits

sew.stitch

Stitch: a narrow zigzag, 1 mm to 1.5 mm wide, or an overlock (ISO 4915 class 500). A plain straight lockstitch has no give and will pop the first time the garment is pulled on.

BASIS source:unl-knits+iso-4915

sew.seamClass

Every straight join in this pattern is a plain superimposed seam: ISO 4916 seam 1.01.01 with ISO 4915 stitch 301. Quote that pair to a factory and they know exactly what you mean.

BASIS source:coats-seams

sew.edgeFinish

Finish the raw edges by serging: ISO 4916 6.01.01. Zigzag over the edge is the home-machine equivalent.

BASIS source:coats-seams

sew.boundEdge

The 1 bias strip(s) bind an edge rather than face it: that is ISO 4916 class 3 (bound), the same class industry uses for t-shirt necklines. Stretch the strip very slightly on inner curves so it lies flat.

BASIS source:coats-seams;computed:bindingPieces=1

cut.yardage

Fabric: 1.6 m at 140 cm wide, folded lengthwise. Buy a little over if your fabric has a nap or a one-way print.

BASIS computed:fabricMeters140=1.6;widthCM=140

cut.pieces

Cut plan: 3 pattern piece(s), 1 of them on the fabric fold. Follow each piece's own cut note.

BASIS computed:pieces=3;onFold=1

tip.notches

Pf nokta: there are 6 notch marks on these pieces and not one of them is decoration each is a point where two edges have to meet. Snip them 3 mm into the seam allowance as you cut, before you move the paper.

BASIS computed:notches=6;snipMM=3

tip.seamAllowance

Pf nokta: the outer line on every piece is the CUT line and the inner one is the SEW line, 15.0 mm apart. Sew on the inner line or the whole garment comes out that much bigger at every seam.

BASIS computed:seamAllowanceMM=15.0

tip.longestPiece

Pf nokta: the largest piece is 'Bias binding (neckline + armholes)', 1213 mm across. Check that your table and your fabric width take it before you start pinning.

BASIS computed:longestMM=1213;piece=Bias binding (neckline + armholes)

tip.negativeEase

Pf nokta: this pattern is deliberately 5.0% SMALLER than your bust. That is not an error the fabric is meant to stretch onto the body. Do not add it back when you cut.

BASIS computed:negativeEasePct=5.0
